DECLARATION OF GANG LIU

I, Gang Liu, being hereby warned that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001, and that such willful false statements may jeopardize the validity of the application or any resulting patent, declares that the facts set forth in this application are true; all statements made of my own knowledge are true; and all statements made on information and belief are believed to be true.

I have many years experience in the electrical engineering specialties of laser drivers and laser sensing systems.

I am the sole inventor of the subject matter of United States Patent Application Serial No. 09/827,764 entitled Laser Driver For A Laser Sensing System. I am familiar with and have reviewed the references cited in prosecution of United States Patent Application Serial No. 09/827,764.

United States Patent No. 5,821,527 to Rudd discloses only a p-channel MOSFET that includes a body diode that is reverse biased during normal operation. It is common practice for engineers to omit the illustration of the body diode when illustrating a MOSFET. In this system the diode is forward biased when a reverse polarity is applied. The MOSFET does not turn off when reverse polarity is applied, and does not provide protection to the laser.
